

Upper flange

model CTK□□-□

Hydraulic circuit diagram

For flow control valve, we recommend the meter-in control. If meter-out control is used, due to the area difference, it will cause back pressure and become high pressure. This can lead to malfunction of the system. Please be aware when designing the circuit.

● Pressure range: 5–35 MPa ● Proof pressure: 52.5 MPa ● Operating temperature: 0–70°C

● Fluid used: General mineral based hydraulic oil (ISO-VG32 equivalent)

● Seals are resistant to chlorine-based cutting fluid. (not thermal resistant specification)

● There is no overload protection mechanism.

*: ISO R898 class 12.9

Clamping must be done within the range of clamp stroke.

Manifold piping and G port piping are available.

Two piping methods are available for model CTK□□U-□ (upper flange) and model CTK□□B-□ (lower flange), manifold piping and G port piping.

Manifold piping

When choosing manifold piping, a flow control valve (model VCH) and an air bleeding valve (model VCE) are mountable on the G ports of the clamp. Only manifold piping is available for model CTK02.

G port piping

Remove plugs when choosing G port piping for model CTK□□U-□ (upper flange). (O-ring must be used.) Remove plugs and O-ring, and mount sealing plug that is included, when choosing G port piping for model CTK□□B-□ (lower flange). (Sealing plug is not mounted with shipment.) The flow control valve and the air bleeding valve should be installed in the middle of oil path.

Flow control valve model VCH

Page →44

Air bleeding valve model VCE

Page →46

Performance table

Clamping force varies depending on the clamp arm length (LH) and hydraulic pressure (P).

Clamping force calculation formula

$$F = P / (\text{Coefficient 1} + \text{Coefficient 2} \times LH)$$

F: Clamping force P: Hydraulic pressure LH: Clamp arm length

CTK06 with clamp arm length (LH) = 80 mm at hydraulic pressure of 20 MPa, Clamping force F is calculated by $20 / (4.61 + 0.0185 \times 80) = 3.3$ kN

Do not use the clamp in the nonusable range. It may cause damage to the cylinder and rod.

model CTK02		Clamping force $F = P / (11.4 + 0.0625 \times LH)$										
Hydraulic pressure MPa	Cylinder force kN	Clamping force kN										Max. arm length Max. LH mm

● See the formula shown on page → 20 for clamping force calculation when pin rod type (CTK□□-□P) is selected.

Swing speed adjustment

Swing time is restricted by the mass and length of the clamp arm (moment of inertia) since the 90° swing action impacts the cam shaft.

1. Calculate the moment of inertia according to the arm length and mass.
 2. Adjust swing speed with flow control valve to ensure that 90° swing time of the clamp arm is greater than the shortest swing time in the graph shown below.
- The cam groove may be damaged in case the swing speed is set at the nonusable range in the graph.

Example of calculation for moment of inertia

$$I = \frac{1}{12} m_1 (4A_1^2 + B^2) + \frac{1}{12} m_2 (4A_2^2 + B^2)$$

I : Moment of inertia (kg·m²)

m : Mass (kg)

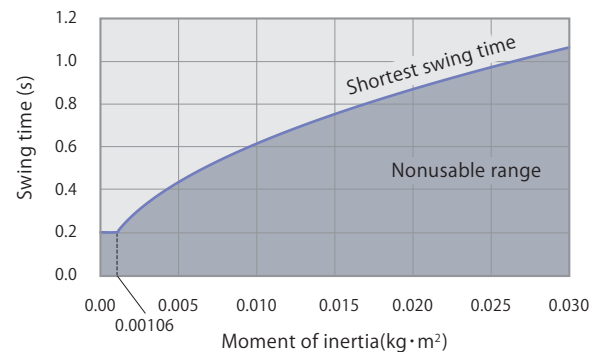

model CTK02

Shortest swing time calculation formula $t = \sqrt{\frac{I}{0.00965}}$

model CTK04

Shortest swing time calculation formula $t = \sqrt{\frac{I}{0.0265}}$

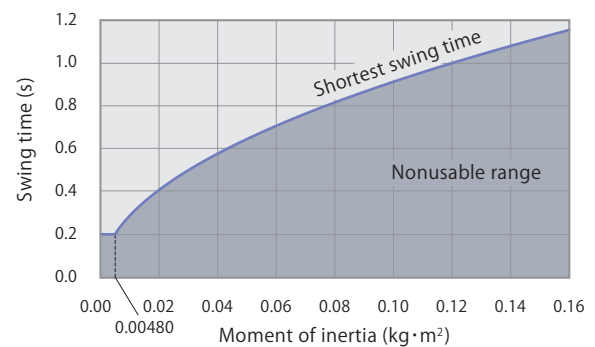

model CTK06

Shortest swing time calculation formula $t = \sqrt{\frac{I}{0.0590}}$

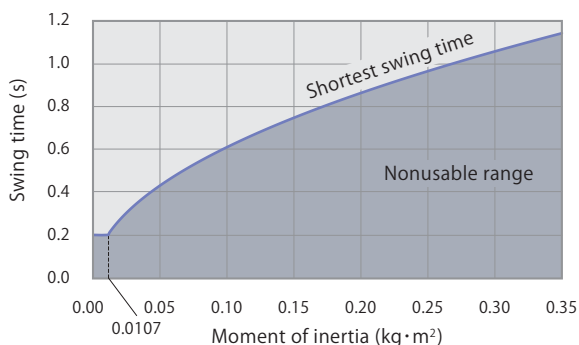

model CTK10

Shortest swing time calculation formula $t = \sqrt{\frac{I}{0.120}}$

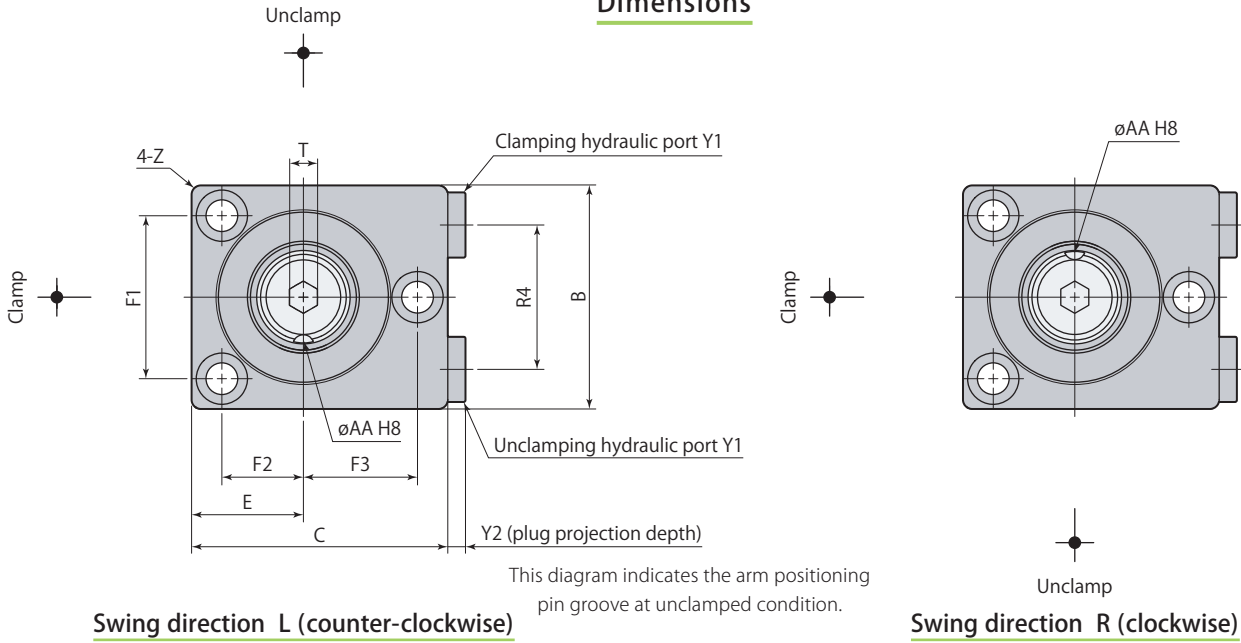

model CTK16

Shortest swing time calculation formula $t = \sqrt{\frac{I}{0.268}}$

Dimensions

Hex nut for arm mount

- Hex nut for arm mount is included.
- Refer to **page → 39** for the details of perfect nut.
- Clamp arm, positioning pin and mounting screws are not included.

Clamping performance

Clamping force calculation formula

$$F1 = \frac{HG}{LH} \times n \times P$$

$$F2 = \frac{HK}{LH} \times n \times P$$

F1, F2=Clamping force (kN),
 n=Coefficient (refer to right table),
 P=Hydraulic pressure (MPa),
 HG, HK=Distance from center of piston to clamping point (mm), LH=(mm)

Model	Coefficient n
CTK02□-□P	0.088
CTK04□-□P	0.145
CTK06□-□P	0.217
CTK10□-□P	0.417
CTK16□-□P	0.581

- Clamp arm, pin and snap ring are not included. Customers must arrange for them.
- Thread at top portion of the rod is for attaching a leveling spring. Screw and leveling spring are not included.

Taper sleeve

Clamp arm details

Not using taper sleeve

Using taper sleeve

* : No need to machine the pin groove (C, ϕD , E) unless positioning pin is used for the arm.
 The positioning pin enables a clamp arm to locate on the clamp firmly and easily.
